

A young man with short dark hair is sitting in a row of red stadium seats. He is wearing large, white over-ear headphones and a black zip-up jacket. He is looking off to the side with a thoughtful expression. The background shows more rows of red seats, suggesting a sports arena or stadium.

SPORTS & ACTIVITIES

TRAIN HARD. STAY STRONG.

Performance that moves. Identity that stays.

Movement stands for energy, dynamism, and team spirit. Our Sport & Activity collection combines high-performance functional textiles with modern corporate fashion—for teams, companies, and active brands that are visibly on the move.

Innovative materials such as intelligent climate control, optimized moisture management, and elastic performance fabrics support the body during changing loads. They ensure a stable microclimate, comfortable wear, and maximum freedom of movement—from intensive training to an active working day.

But performance doesn't end with the material. Versatile finishing options turn the fabric into a high-quality garment. They ensure a stable microclimate, comfortable wear and maximum freedom of movement – from intensive training to an active working day. But performance doesn't end with the material. Versatile finishing options transform functional clothing into an individual brand image. Whether it's a club logo, corporate branding, or event design, every product becomes a visible message. At the same time, responsible material selection is becoming increasingly important. Durable quality and the use of certified fabrics underline the claim to combine function and sustainability in a meaningful way.

For us, sports & activity means:

Technology that supports.

Design that creates identity.

Quality that impresses in the long term.

DURABLE. FUNCTIONAL. CERTIFIED.

For us, corporate responsibility also involves the mindful use of resources. We are convinced that it is only by working together that we can grow and move boldly towards the future. Just as we have been doing for more than 100 years.

New fashion is created from recycled polyester

We use recycled polyester in selected products, which are certified in accordance with the Recycled Claim Standard (RCS) or the Global Recycled Standard (GRS). This certification ensures that the proportion of recycled material is verifiably tracked throughout the supply chain and that the material specifications for the end product are reliable. The products in question are labelled accordingly. The OEKO-TEX® Standard 100 guarantees that all components of an item have been tested for harmful substances and are safe for health.

OEKOTEX® Standard 100

The OEKO-TEX® STANDARD 100 certifies that all textile and non-textile components of a product – from the fabric to the buttons and zips – have been tested for harmful substances and meet strict human-ecological requirements. For customers, this means a high level of safety and confidence, as certified products are tested according to internationally standardised criteria and pose no risk to health.

NOTICEABLY SMARTER COMFORT.

CLIMACTIVE – SMART THERMAL REGULATION FOR ACTIVE MOVEMENT

Climactive is an innovative functional fabric that helps the body maintain an optimal temperature during physical activity. Rather than simply insulating or ventilating, it actively regulates body temperature – adapting to movement, heat and humidity.

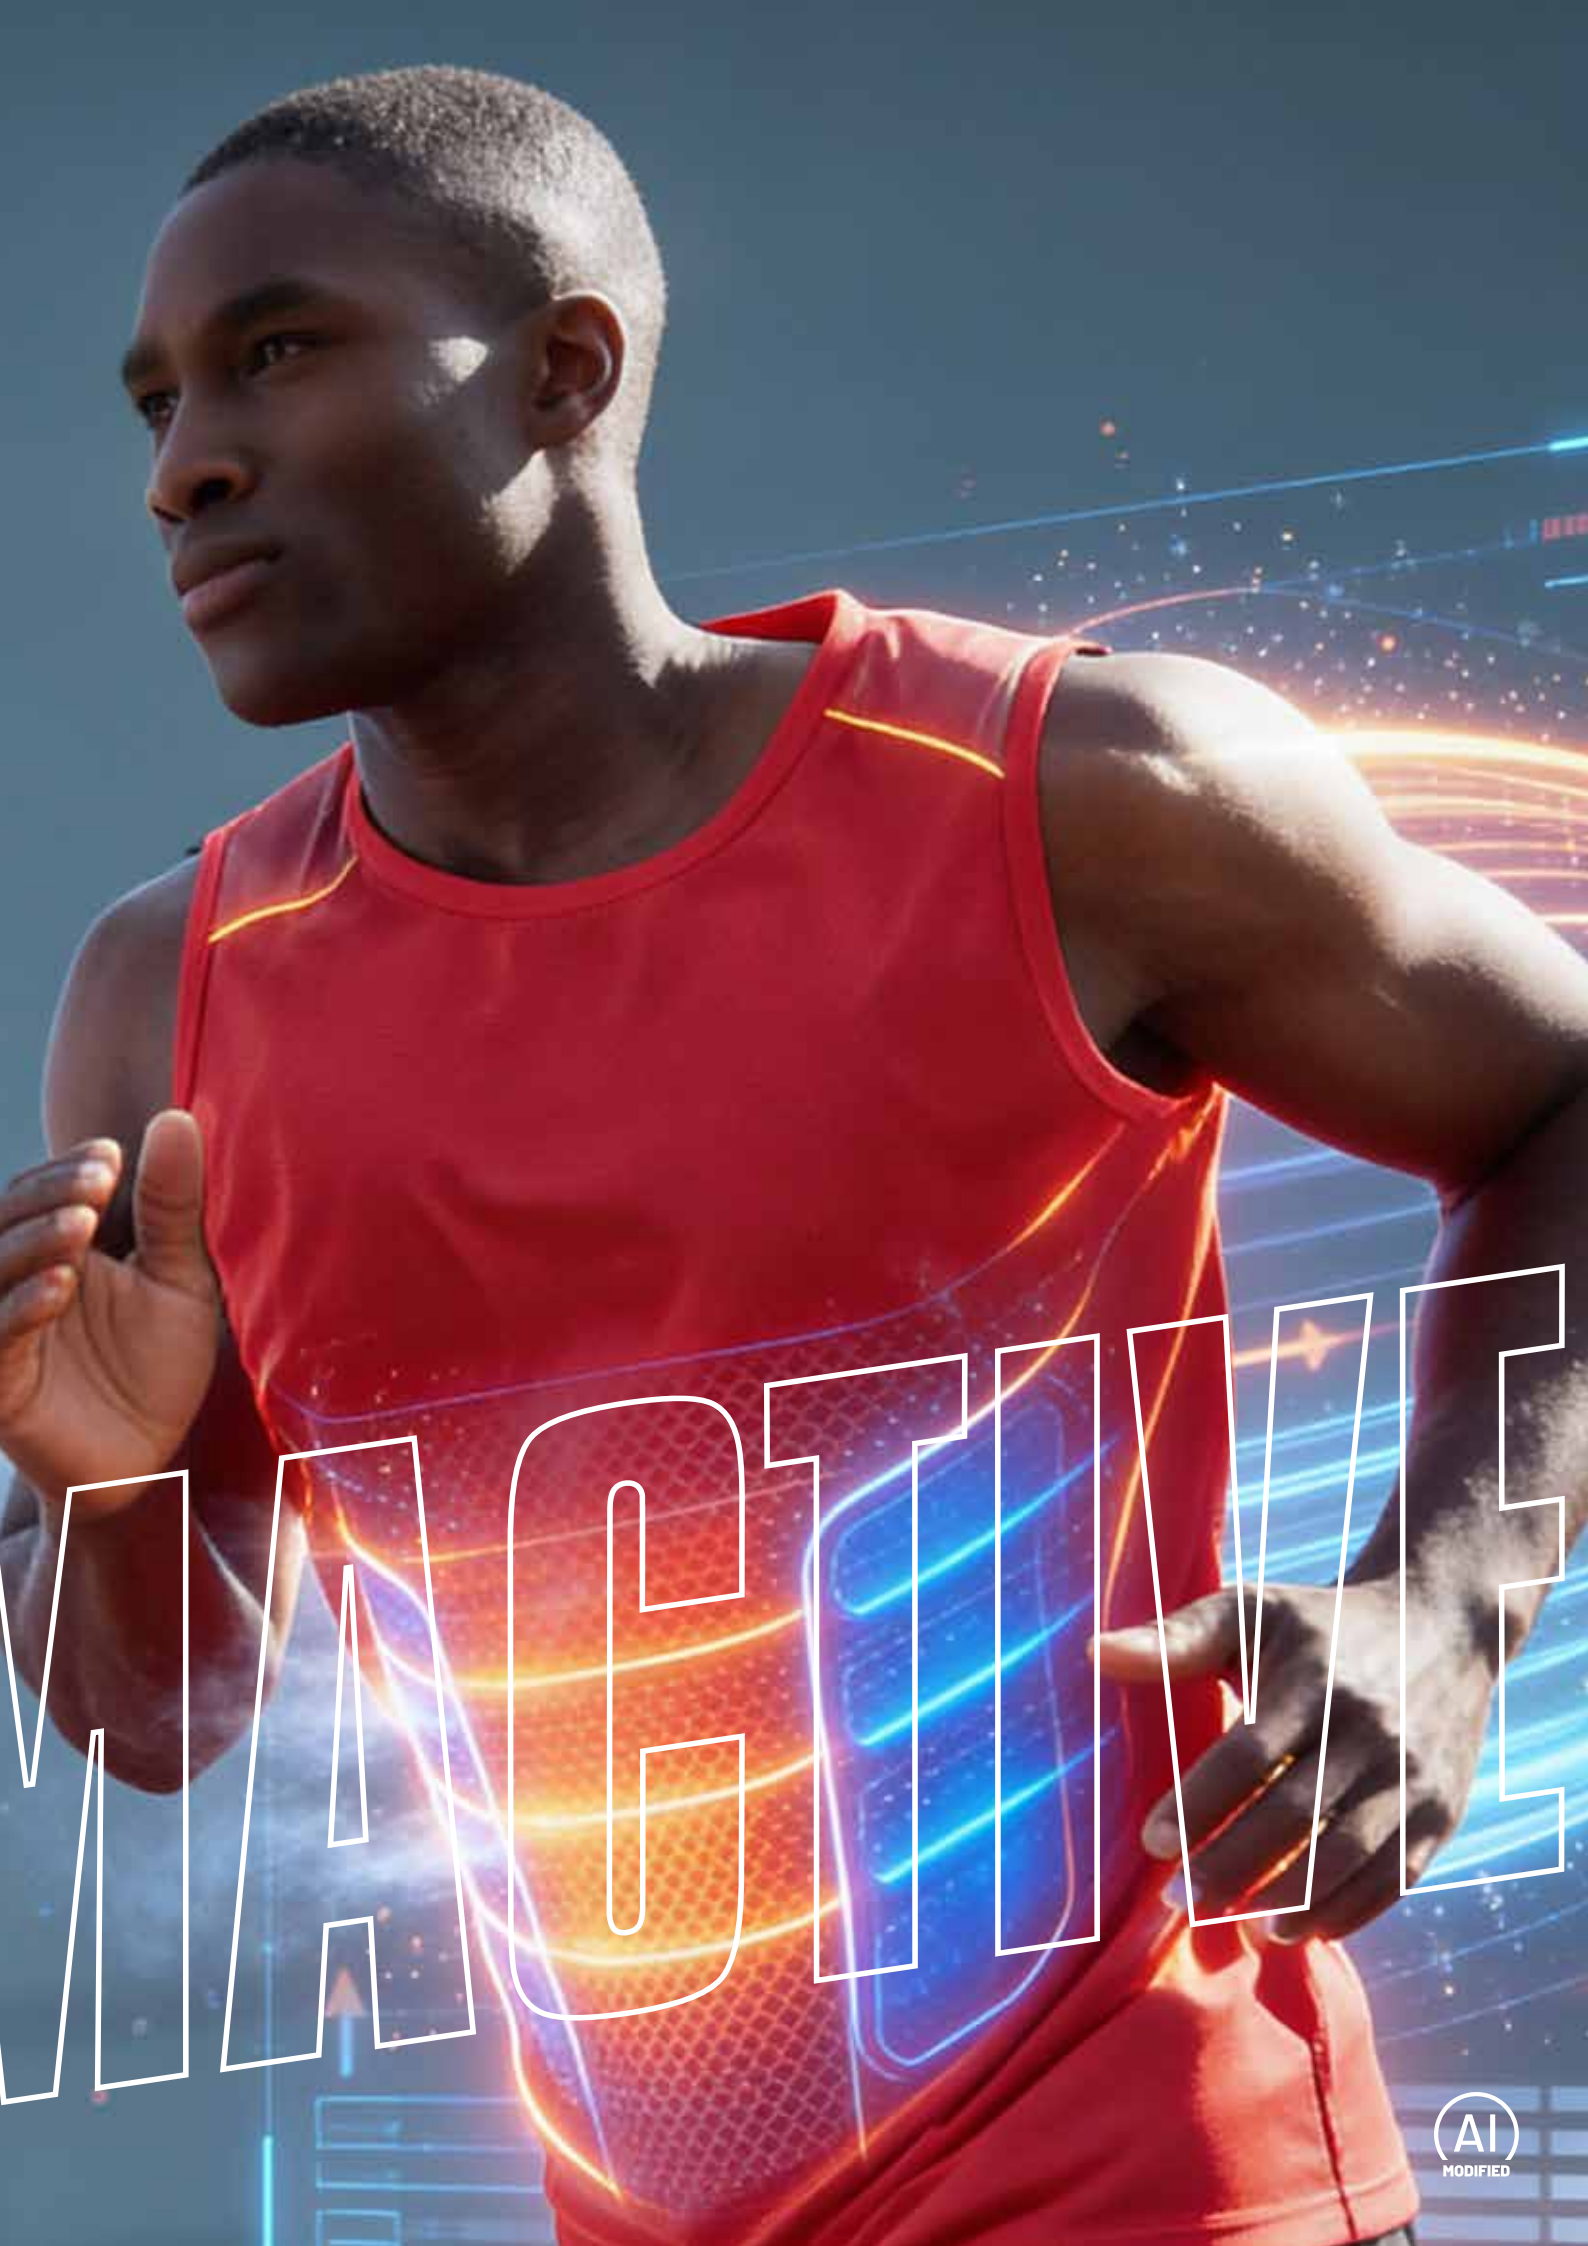

Active particles integrated into the fabric react immediately to changing conditions: if body temperature rises or sweat production increases, they specifically promote the evaporation of moisture. Excess heat is efficiently dissipated, reducing overheating.

At the same time, the material remains pleasantly light and dry against the skin. If the exertion level drops or the body cools down, Climactive specifically reduces heat loss. Stored heat is retained for longer – without restricting freedom of movement or causing heat to build up.

The result is a material that adapts flexibly to changing demands and provides lasting support for comfort, performance and well-being.

FUNCTIONS & FEATURES

BREATHABILITY/PERMEABILITY TO VAPOUR

Functional textiles must have the ability to transport moisture from the skin to the fabric surface as fast as possible. Permeability shows how much steam in grams can evaporate on a surface of 1 m² within 24 hours. The higher this figure, the more breathable the textile is.

WATER COLUMN

The ability to withstand water pressure without moisture penetrating into the material is given by the water column (mm). The minimum standard is a water column of 1,500 mm.

FLEECE INSIDE

"Fleece Inside" refers to a soft, brushed inner surface that feels comfortable against the skin and provides extra warmth. The material ensures excellent comfort, good thermal insulation and a pleasantly soft feel – ideal for cooler temperatures and active use in everyday life or sport.

4-WAY STRETCH

4-way stretch refers to a particularly elastic fabric that can stretch in all directions. As a result, the fabric offers maximum freedom of movement, high comfort and an optimal fit. Ideal for sporting activities and dynamic everyday or work situations.

CAPS FOR PRINTING

Caps with this label are ideal for printing and embroidering. The construction of the caps leaves a lot of space so the cap is easy to decorate, with the logo presented to perfection.

TEAR-OFF LABEL

Our Tear off!® label makes it easy to replace the neck label on T-shirts. We take care of the relabelling for you using a special transfer process.

UPF 50+

The UPF (Ultraviolet Protection Factor) indicated on UV-protective clothing shows how much longer somebody wearing these clothes can stay in the sun without suffering any damage to health. Therefore, the UPF-indication on textiles corresponds to the sun protection factor of sun-screens. This is based on the self-protection time of the skin, which varies considerably depending on the individual skin type.

TAPED SEAMS

To avoid moisture penetrating into the fabric, seams and stitches can get taped. Taped seams are 100 % water-proof.

COOLMAX®

Through the channels of the breathable COOLMAX®-fibre humidity is evacuated extremely fast to the outer layers of the fabric. Thus the body is kept dry. At the same time a natural body temperature regulation is supported.

TOPCOOL®

TOPCOOL® polyester fibres perfectly absorb moisture due to their special surface and evacuate it quickly to the outside where it can evaporate.

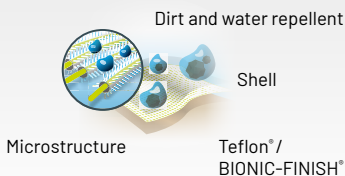

SUGENRO® GRS INSULATION

Sugenro® GRS Insulation is an innovative, premium insulation material made from 100% recycled PET bottles. The down-like, lightweight filling offers impressive thermal performance, breathability and durability. GRS certification confirms high environmental and social standards and supports the conservation of natural resources.

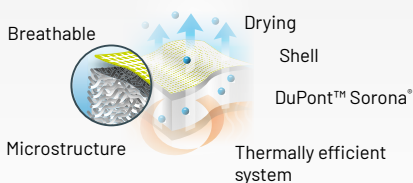

BIONIC-FINISH® ECO

BIONIC-FINISH® was developed, following the example set by nature, 'learning from nature'. The textile is protected against water and dirt by a very thin crystalline structure. BIONIC-FINISH® ECO protects man and nature.

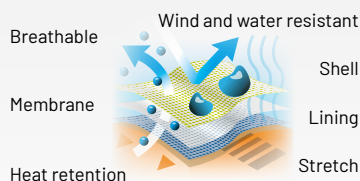

SORONA® AURA

sorona® AURA fibres consist of 37% vegetable components, obtained from renewable raw materials. Garments with sorona® Aura offer an eco-friendly alternative with outstanding breathability, lightweight comfort and efficient heat retention. sorona® AURA offers the perfect mix of sustainability and performance.

SOFTSHELL

Softshell with TPU membrane consists of three layers. Due to the microporous TPU membrane as middle layer the material is water-proof, wind-proof and breathable at the same time.
